HEALTHY AREAS

← Individuals can exercise in the water by dragon boating. There is a nice view of Science World and BC Place across the False Creek water. Another water activity available here is paddle boarding. This area is excellent due to the great views as well as a bike lane along the pathway. The environment here allows one to appreciate the nature and architecture around oneself.

→ Outside of the Creekside Community Center there are groups exercising and getting fresh air. This is visible to the walkers and cyclists while also being on the other side of the concrete barrier providing a degree of privacy. There is a distinct advantage to exercising in public spaces where individuals passing by can become motivated to exercise themselves. As with the rest of this region, there are breath taking views of the North Shore Mountains from this location.

← This picture shows solid hand rails along a high point above the body of water. There is clear visibility above the railing, while allowing for smaller children to see the water without an obstacle in their way. It is not easily climbable therefore reduces concern for parents of their children falling over.

→ The canoe bridge is a very popular location for visitors to walk along. It is not a large bridge but its architectural design fascinates people to come and look at it. At night the bridge is well lit which makes pedestrians feel safer while crossing. The views here are very nice towards False Creek.

← The bars in the middle of the pathway are dividers for cyclists and pedestrians in order to avoid collisions. Cyclists can go up to 15km/h making it imperative that a physical barrier is present for the safety of pedestrians. Both modes of transportation are popular along this pathway therefore a divider is important to direct traffic and allow both modes to enjoy this route safely. This region is popular for its restaurants (Craft Brewery and Tap and Barrel), high volumes of pedestrians can be walking here simultaneously making a physical barrier more important.
